CYBEX

POSITION DESCRIPTION

IT SOFTWARE ENGINEER

BASIC PURPOSE:

Use technical knowledge and expertise to design, modify, develop, write and implement web based applications and websites. Duties include the design, development, deployment and maintenance of new and existing sites.

DUTIES & RESPONSIBILITIES:

- Design, build, and maintain customer-driven web applications
- Make constructive suggestions for change and be a consistent advocate for user-centric design.
- Produce world-class prototypes using HTML, XML, CSS, AJAX, ASP.NET.
- Help administer all CYBEX web sites (Intranet, Extranet, Internet, Web Applications.)
- Maintain and update content on the company's web site.
- Provide technical end user support.
- Perform routine site maintenance and insure site security.
- Review and create reports on various web and site statistics.
- Perform other duties as assigned.

QUALIFICATIONS AND SKILLS NEEDED:

Minimum formal education, experience and training:

- Bachelor's degree in Computer Science or equivalent.
- 3+ years of development experience
- Extensive experience in HTML, CSS, and Javascript.
- Experience programming in C#/.NET.
- Working knowledge of graphics principles, web browsers and general Web layout and design standards.
- Understanding of online development strategies and website security issues and mechanisms.
- Basic SEO knowledge.
- Highly motivated, self-directed individual with strong communication skills (writing, editing, and proofreading) and customer interface skills.

PREFERRED EDUCATION, EXPERIENCE AND TRAINING:

- Experience with designing and maintaining Microsoft SQL Server databases.
- Experience with jQuery library.
- Experience with Salesforce.com/Apex.
